1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-11, drawn to a multi-layered coiled hollow fiber bundle comprising a plurality of coiled hollow fibers arranged so as to create at least two layers.

Group II, claims 12-18, drawn to a method for producing a multi-layered coiled hollow fiber bundle comprising the steps of determining a performance parameter from a single layer coiled hollow fiber bundle and determining the needed value of the variables for each additional layer.

Group III, claims 19-21, drawn to a method of manufacturing a multi-layered separation module comprising the steps of selecting a mandrel having a predetermined diameter and length, selecting a number of hollow fibers to comprise a layer, winding fibers around the mandrel at the pre-selected angle, adjusting the length of wound fibers, adjusting the fiber lengths, number of fibers and winding angle of subsequent layers.

Group VI, claims 22-25, drawn to a single layered coiled hollow separation module comprising a layer of coiled hollow fibers and a housing.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special

Art Unit: 1723

technical features for the following reasons: All of the groupings are directed to method or apparatus for coiled hollow fiber bundle, but each group has a different special technical feature not shared by the remaining groups. Group I is directed to an apparatus which has the special technical feature of a plurality of coiled hollow fibers arranged so as to create at least two layers not shared by any of the remaining groups. Group II is directed to a method which has the special technical feature of the steps of determining a performance parameter from a single layer coiled hollow fiber bundle and determining the needed value of the variables for each additional layer not shared by any of the remaining groups. Group III is directed to a method which has the special technical feature of the steps of selecting a mandrel having a predetermined diameter and length, selecting a number of hollow fibers to comprise a layer, winding fibers around the mandrel at the pre-selected angle, adjusting the length of wound fibers, adjusting the fiber lengths, number of fibers and winding angle of subsequent layers not shared by any of the remaining groups. Group VI is directed to an apparatus which has the special technical feature of a layer of coiled hollow fibers and a housing not shared by any of the remaining groups.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Art Unit: 1723

amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
